## ComfortLine DIP switch L-R2

## Product features

- Linear casing shape

## Functions

- Selectable current output via DIP switch
- Suitable for central battery system for emergency lighting acc. to EN 50172

## Electrical features

- Mains voltage: $220-240 \mathrm{~V} \pm 10 \%$
- Mains frequency: $50-60 \mathrm{~Hz}$
- DC operation: 198-276 V, 0 Hz
- Push-in terminals: $0.5-1.5 \mathrm{~mm}^{2}$
- Power factor at full load: 0.96
- Max. working voltage (Uout): 250 V or 300 V (186824)
- Secondary side switching of LED modules is not allowed.

## Safety features

- Protection against transient main peaks up to 1 kV (between $L$ and $N$ ) and up to 2 kV (between L, N and PE)
- Electronic short-circuit protection
- Overload protection
- Protection against "no load" operation
- Degree of protection: IP20
- Protection class I

## Packaging units

| Ref. No. | Packaging unit <br> Pieces <br> per box |  |  |
| :--- | :--- | :--- | :--- |
| Boxes <br> per pallet | Weight <br> g |  |  |
| 186820 | 30 | 64 | 169 |
| 186824 | 30 | 64 | 173 |
| 186982 | 30 | 64 | 180 |
| 186983 | 30 | 64 | 176 |
| 186984 | 30 | 64 | 176 |

## Applied standards

- EN 61347-1
- EN 61347-2-13

- EN 61547
- EN 61000-3-2
- EN 62384

- EN 60598-2-22
- EN 55015

## Dimensions

- Casing: M7. 1
- Length: 280 mm
- Width: 30 mm
- Height: 21 mm

## Product guarantee

- 5 years
- The conditions for the Product Guarantee of the Vossloh-Schwabe Group shall apply as published on our homepage
(www.vossloh-schwabe.com).
We will be happy to send you these conditions upon request.

Typ. performance graphs for 186984 / Type ECXe $\mathbf{7 0 0 . 4 1 2}$

## Safety functions

- Transient mains peaks protection:

Values are in compliance with EN 61547
(interference immunity).
Surges between L-N: up to 1 kV
Surges between L/N-PE: up to 2 kV

- Short-circuit protection: The control gears are protected against permanent short-circuit with automatic restart function.
- Overload protection: The control gears only work in range of rated output power and voltage problemfree.
Please check before switch-on mains power supply that the selected LED load is suitable (see Electrical Characteristics on data sheet).
- No load operation: The control gear is protected against no load operation (open load).
- If any of the above mentioned safety functions will be triggered, disconnect the control gear from the power supply then find and eliminate the cause of the problem.

## DC and emergency lighting operation

The control gears are suitable for direct voltage operation (DC).
Reliable DC operation is guaranteed if the specified working area of LED driver is maintained.

- DC range: 198-276 V
- Reducing to 176 V : With reduced service life time possible
- Light level at DC operation (EOFi): 100\% (not adjustable)
- DC operation: 3 hrs. according to EN 50172

## Assembly and Safety Information

Installation must be carried out under observation of the relevant regulations and standards. Installation must be carried out in a voltage-free state (i.e. disconnection from the mains). The following advices must be observed; non-observance can result in the destruction of the LED drivers, fire and/or other hazards.

## Mandatory regulations

- DIN VDE 0100
- EN 60598-1

## Mechanical mounting

- Mounting position: Built-in: Any position inside a luminaire is allowed
Independent application: Drivers are not allowed to use for independent applications
- Mounting location:

LED drivers are designed for integration into luminaires or comparable devices. Installation in outdoor luminaires: degree of protection for luminaire with water protection rate $\geq 4$ (e.g. IP54 required).

- Degree of protection: IP20
- Clearance:

Min. 0.10 m from walls. ceilings and insulation

- Surface: Solid and plane surface for optimum heat dissipation required.
- Heat transfer: If the driver is destined for installation in a luminaire. sufficient heat transfer must be ensured between the driver and the luminaire casing.
LED drivers should be mounted with the greatest possible clearance to heat sources. During operation. the temperature measure at the driver's tc point must not exceed the specified maximum value.
- Fastening:

Using M4 screws in the designated holes

## Electrical installation

- Connection
terminals:
- Stripped length:
- Wiring:
- Polarity:

Push-in terminals for rigid conductors with a section of $0.5-1.5 \mathrm{~mm}^{2}$; AWG20-16
8-9 mm
The mains conductor within the luminaire must be kept short (to reduce the induction of interference).
Mains and lamp conductors must be kept separate and if possible should not be laid in parallel to one another.
Please ensure the correct polarity of the leads prior to commissioning. Reversed polarity can destroy the modules.

- Secondary load:
- Wiring diagram:

## Selection of automatic cut-outs for VS LED drivers

- Dimensioning automatic cut-outs High transient currents occur when an LED driver is switched on because the capacitors have to load. Ignition of LED modules occurs almost simultaneously. This also causes a simultaneous high demand for power. These high currents when the system is switched on put a strain on the automatic conductor cut-outs. which must be selected and dimensioned to suit.
- Release reaction

The release reaction of the automatic conductor cut-outs comply with VDE 0641. part 11. for B. C characteristics. The values shown in the following tables are for guidance purposes only and are subject to system-dependent change.

- No. of LED drivers

The maximum number of VS LED drivers applies to cases where the devices are switched on simultaneously. Specifications apply to single-pole fuses. The number of permissible drivers must be reduced by $20 \%$ for multi-pole fuses. The considered circuit impedance equals $400 \mathrm{~m} \Omega$ (approx. 20 m [2.5 mm²] of conductor from the power supply to the distributor and a further 15 m to the luminaire).

| Type | Ref. No. | Automatic cut-out type and <br> possible no. of VS drivers <br> pcs. |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Automatic cut-out type | B 10 A | B 13 A | B 16 A | C 10 A | C 13 A | C 16 A |  |
| ECXe 350.327 | $\mathbf{1 8 6 8 2 0}$ | 27 | 35 | 44 | 45 | 59 | 73 |
| ECXe 250.410 | $\mathbf{1 8 6 9 8 2}$ | 27 | 35 | 43 | 45 | 59 | 73 |
| ECXe 350.331 | $\mathbf{1 8 6 8 2 4}$ | 13 | 17 | 21 | 22 | 29 | 35 |
| ECXe 700.412 | $\mathbf{1 8 6 9 8 4}$ | 12 | 15 | 19 | 20 | 26 | 32 |
| ECXe 500.411 | $\mathbf{1 8 6 9 8 3}$ | 12 | 16 | 20 | 21 | 27 | 34 |

- To limit capacitive inrush currents the current carrying capacity of each circuit breaker (fuse) can be increased with the help of our ESB (Ref. No.: 149820, 149821, 149822) inrush current limiters.
